

We design, manufacture, install and service with an 18-month warranty:

Overloading systems

Lifting systems

Automated systems

Gate systems

**Mobile
Service ***

**We carry out export deliveries - FCA terms Zaporizhzhia, Ukraine.
Prepayment 50%. Payment in parts for serial order.**

The authorized production is located in the city of Zaporozhye (Ukraine) and is equipped with the necessary modern equipment.

Product quality meets the following standards: The Machinery Directive 2006/42/EC; * EN 60204-32:2006; * EN 1495:2010; * EN 1553:2004; * EN 982:2003; IEC 61000-6-2:2008; 12.2.003-91; 12.2.007.0-75 .

The trademark is registered and is the property of the company.

**1680 certified products 580 modernized production facilities
12 years of experience 10 partner countries**

DOCKER
systems

Carrying capacity

6000 - 10000 kg

Working range

1000 – 1700 mm

Warantee

18 months

Mobile Ramp

*It is a mobile hydraulic device.
Mobile ramp is installed in warehouses and cargo docks for loading/unloading semi-trailers, road trains, containers, wagons.
Transported by forklift.*

Safety margin +30%

DOCKER
systems

Carrying capacity

6000 - 10000 kg

Working range

1000 – 1600 mm

Warantee

18 months

Unloading Ramps

It is a stationary mechanical device.

Lifting and lowering is done manually supporting screw devices (jacks).

Designed for simultaneous processing from 2 to 10 semi-trailers or unloading from wagons, etc. with a forklift to the ground.

Installed with a crane.

Safety margin +30%

Carrying capacity
6000 kg та 10000 kg.

Working range

+500(850) mm

-250(350) mm

Warantee

18 months

Dock Levellers

It is a hydraulic device with a movable upper platform.

There are two types of products - hinged and telescopic (retractable) lip.

It is installed in a concrete ramp or in a removable farm (Dock House).

Compensates the height difference between the floor of the car body (wagon) and the floor of the warehouse (ramp).

The set includes a control panel.

*Installation in the pit. **Safety margin +30%***

DOCKER
systems

Carrying capacity

4050 kg

Working range

+200(250) mm

- 150(200) mm

Warantee

18 months

Hinged bridges

Is a mechanical structure.

Platform with spring compensators and sides.

Hinged bridges are of two types - stationary and sliding. It is installed on a concrete ramp or in the opening of a warehouse gate.

Compensates the difference in the height of the floor of the car body (wagon) and on top of the warehouse (ramp).

*Surface mounting. **Safety margin +30%***

DOCKER
systems

Carrying capacity
1000 - 10000 kg
Working range
1600 - 10000 mm
Warantee
18 months

Scissor lifts

*It is a hydraulic lifting device
The platform can be equipped with a fence and hinged lips.
There are two types of designs - single and paired.
It is installed in the floor, a concrete ramp or in a Dock House.
Can have the desired number of stops at a specified height.
The set includes a control panel.
Installation in the pit. **Safety margin +30%***

DOCKER
systems

Carrying capacity
500 - 8000 kg
Working range
1600 - 10000 mm
Warantee
18 months

Cantilever lifts

It is an electric or hydraulic lifting device.

The platform can be equipped with a fence and ramps. There are two types of structures - with one and double masts. It is installed on the floor, concrete ramp.

Can have the desired number of stops at a specified height.

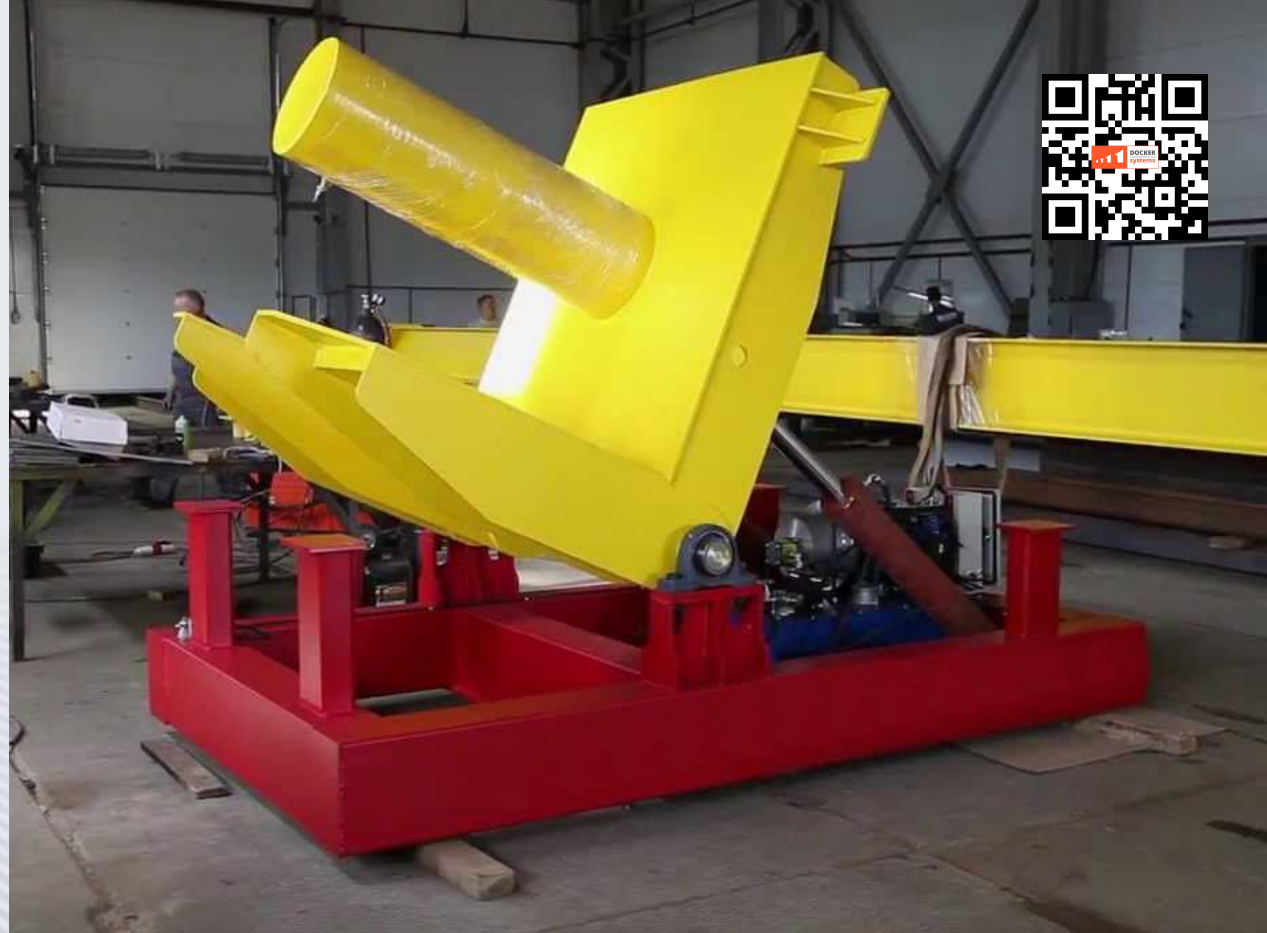

The set includes a control panel

*Overhead or in-hole installation. **Safety margin +30%***

DOCKER
systems

Carrying capacity

1500 - 20000 kg

Working range

0 - 90 dgr

Warantee

18 months

Tilters of rolls

It is a hydraulic device.

There are two types of designs – for edging rolls and edging containers.

It is installed on the floor or concrete ramp.

Can have the desired number of stops at a specified angle.

The set includes a control panel

*Overhead installation. **Safety margin +30%***

Carrying capacity
6000 kg 10000 kg
Working height
800 - 1200 mm
Warantee
18 months

Dock houses and farms

It is a transshipment system together with a dock leveller and a dock shelter in front of the warehouse building. Allows full use of warehouse space. There are two types of designs - direct overloading 90° and oblique overloading 45°, 60°.

*A portable farm is an analogue of a Dock house, but without walls and a roof. It consists of a base on supports, into which the dock leveller is installed. **Safety margin +30%***

Repair platforms for forklifts

They are both mobile and stationary structures. The platform is designed for lifting people to a height of no more than 8m for repair or other types of work.

Hole seals

It is a composite structure that, during rear parking of a cargo vehicle, covers the body and protects the cargo from weather influences.

Frames the gate opening.

Reduces energy consumption.

Portable Bridges for unloading containers

It is a portable structure. Designed to compensate for the difference in height between the floor of sea and railway containers and the surface of the ground or railway ramp.

***Designing. Production. Assembling. Service.
Warranty 18 months.***
